Sizzy Developer Job Opening

About Us

We're Sizzy! Our mission is to take out all the painful processes from web development, and make it fun and easy. Our product Sizzy is a custom browser for developers. It started as a browser for testing responsive design and has now evolved into a feature-packed browser with a number of features aimed at speeding up development workflow. You can learn more about it at sizzy.co.

Job Description

You will be working directly on the Sizzy app, which mainly uses React, Electron, mobx-state-tree, and Chakra UI. Good knowledge and some experience in React, Electron, and mobx is required. You don't need to be an expert, but you should be fluent enough to get started right away. The job is 100% remote, so your current location is not an issue.

Hiring Process

Learn: After evaluating your profile, we will have an interview over Zoom where we will chat about your background and what it is like to work with us. If you have any past projects or a side project that you can show us, this would be a great time. We hate whiteboard interviews, so you won't be asked to calculate the space-time complexity of sorting a binary tree.

Make stuff: If we feel that you could be a good fit for this role, we are going to assign you a small project that will last for 2 weeks. In this project you will be working on a part of the Sizzy app. You can work part-time or full-time on it, as per your convenience. You will be paid hourly for this project.

Decide: Our team will determine if we can offer you a full-time role. Then it's your turn to decide if you want to work with us.

If you are interested in joining our team, say *Hi* at hey@praneet.dev. We're excited to meet you.
